2009 R&D 100 Award Winner

Superconducting Wires by Epitaxial Growth on SSIFFS

Superconducting wires are flexible, single-crystal, high-temperature cables that enable high-performance advantages for electric power grid applications.

Developed By
Oak Ridge National Laboratory

Sponsored by
U.S. Department of Energy's Office of Electricity Delivery and Energy Reliability

Recipients left to right:
Eliot Specht, Sung-Hun Wee, Yuri Zuev, Claudia Cantoni, Jim Thompson, Dominic Lee and Amit Goyal
