

Hans Langeveld (1961), was trained as a tropical agronomist. He worked at the Free University in Amsterdam and Wageningen University and Research Centre before starting a private research and consulting company called Biomass Research in 2008 which is oriented towards the sustainable production of biomass for food, feed, biofuels and biobased products.

Hans has much experience in the development and evaluation of bioenergy and biobased production chains. His main focus is on feedstock availability, land use change, soil carbon dynamics and GHG emissions. He studied sustainable land use in five continents and co-authored many scientific papers as well as books on biofuel cropping systems, on farming systems and on the biobased economy.
