

# The Snowflake Power Divertor

This technology can dissipate the 100 MW/m<sup>2</sup> (more than the Sun's surface) of power load on future commercial fusion reactors by spreading the heat out over a large area in accordance with the way heat fluxes form.

## Jointly developed by

Lawrence Livermore National Laboratory  
 EPFL Center for Research in Plasma Physics  
 Princeton Plasma Physics Laboratory  
 Oak Ridge National Laboratory

## Sponsored by

Oak Ridge National Laboratory  
 Laboratory Directed Research and  
 Development program
